

# STREET FIRE RMS®

## KEY FEATURES

- **Intuitive interface allows crews to document incidents quickly & easily with minimal training.**
- **Highly customizable layout allows crew to capture data in a way that matches your agency workflow.**
- **Agency-configurable validation rules alert crews to missing or incomplete data while on scene.**
- **Automated emails remind Captains & Battalion Chiefs when required reports are missing or incomplete.**
- **Powerful reports engine allows you to create, schedule & distribute reports.**

## The World's Most Intuitive Fire RMS Technology

Designed by first responders, STREET FIRE RMS® offers comprehensive data collection of all NERIS modules, including fire investigation, exposure & rehabilitation tracking. This superior data-collection technology improves the quality of incident documentation, while making data collection easier and more flexible than ever.

An intuitive user interface improves efficiency and accuracy of documentation in the field, and back-end configuration tools allow administrators to customize workflows to meet local requirements, without compromising compliance with NERIS standards.

for EMS and Rescue

# Intuitive Design Anyone Can Use

STREET FIRE RMS® was designed with tools that allow firefighters to gather more accurate documentation in less time. Some of these tools include auto-tabbing from field to field and smart pick lists that allow users to quickly select entries for fields with large numbers of choices.

The screenshot shows the STREET FIRE RMS data entry interface. On the left is a sidebar with buttons for Inc, EMS, Casu, App, Pers, and Auth. The main form contains fields for Injured Person Name (John MDoe), Suffix, Gender (Male), Age (59), DOB, Race (Black or African), Ethnicity (Non Hispanic), Affiliation (Civilian), Injury Time (13:32:22), Severity (Moderate), Cause of Injury (Overexertion or strain), Human Factors Contributing to... (None), Factors Contributing to Injury (Collapse, other), Activity When Injured (Fire control), Location at Time of Incident (In area of ignition and involved), and General Location at Time of Inj... (In area of ignition and involved). A pop-up window titled 'Human Factors Contributing to Injury' is open, showing a grid of options: Asleep, no known impairment; None; Physically disabled; Physically restrained; Possibly impaired by alcohol; Possibly impaired by other drug or chemical; Possibly mentally disabled; Unattended or unsupervised person; and Unconscious. The bottom of the form has buttons for Copy, New, and Clear.

Custom data entry tools for efficient documentation

# Integrated Reports Module

STREET FIRE RMS® comes equipped with a powerful yet easy to use report builder, loaded with a predefined set of commonly used NERIS Reports. Its intuitive interface allows users to create and render reports from any NERIS data elements and to customize the results that are displayed. Admins can also set up reports to be automatically generated and sent to designated email addresses on a user-defined schedule.

The screenshot shows the STREET FIRE RMS report builder interface. It has three main sections: Parameters, Criteria, and Columns. The Parameters section has fields for Start Date and End Date, and an Add Parameter button. The Criteria section has fields for Alarm Date, Greater Than or Equal to Parameter, Start Date, AND, Alarm Date, Less Than or Equal to Parameter, and End Date, and an Add Clause button. The Columns section has fields for Alarm Date, AS Alarm Date, Incident Type, AS Incident Type, Basic Module Remarks (NFIRS), AS Remarks, Fire Service Injuries, AS Fire Service Injuries, and Fire Service Deaths, AS Fire Service Deaths, and an Add Column button.

Street Fire RMS® report builder

# Agency-Customizable Interface

The STREET FIRE RMS® pages are highly customizable, giving agencies the ability to customize the entire layout. Individual data elements can easily be moved around on their default pages, moved to a different page, or hidden completely. This allows any agency to collect the data it wants, where it wants. Layout changes can be made by agency administrators at any time without interrupting crew members.

# Overdue Incident Report Reminders

STREET FIRE RMS® features automated overdue incident report reminders that allow Captains and Battalion Chiefs to be notified if there are incident reports they are responsible for completing which they have not yet finished. When used with CAD data that includes personnel assignment information, STREET FIRE RMS™ can intelligently determine the Captain responsible for completing an incident report, even if it has not yet been started. The frequency of sending reminders as well as the threshold of what is considered overdue can be customized to meet your agency's needs.

# Works with Street EMS®

When used with STREET EMS®, you can start a NERIS report from an existing ePCR. Overlapping data elements will auto-populate the NERIS report, eliminating double data entry. From Street EMS®, crew members can even complete an entire NERIS report for a basic EMS call at the same time that they are filling out the ePCR. You can also search for, view, and generate reports on both your EMS and Fire RMS records all at once, all in one place.
